

Circular Design Group Activity

BRIEF

Design your own product using recycled materials. This can be a material seen in the resource box or a new one which could be repurposed into something else.

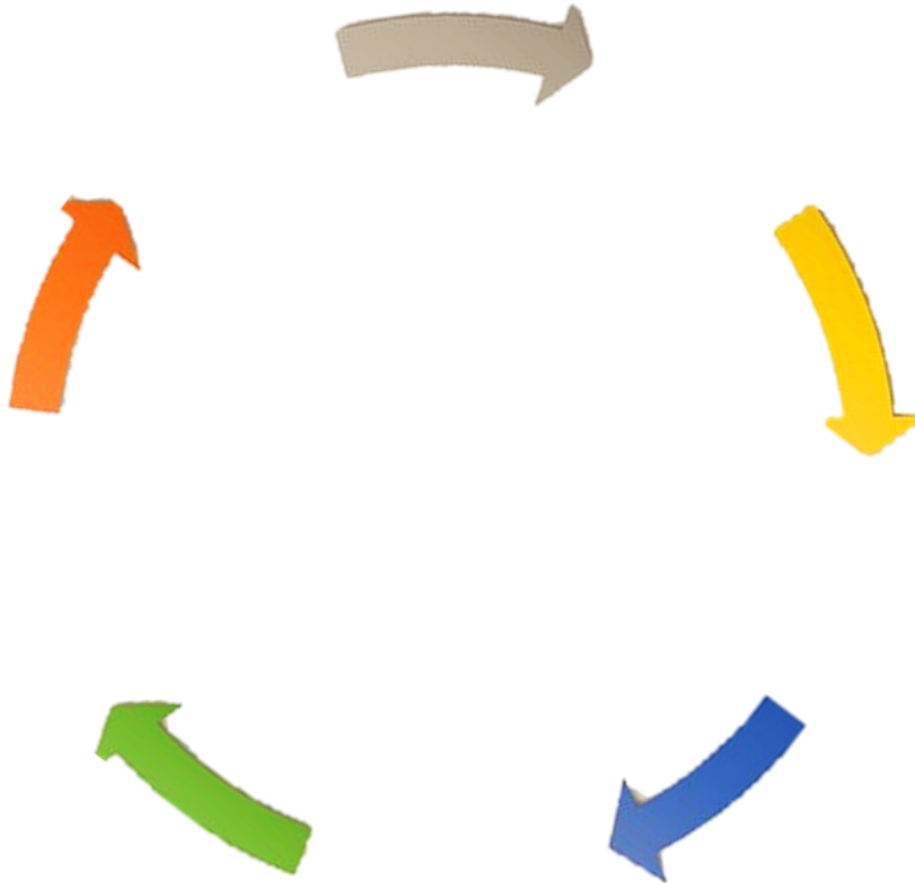

- The product must fit into the circular model. It will be made from “waste” and your group will have to think of a sustainable option when it comes to the end of its life.
- Your group must then present your design to the rest of the class.

Discuss and draft your product, then draw the final annotated designs below:

Our product will be made from...

FINAL DESIGN

DESIGN CIRCULARITY

Class presentation ideas...

- What is your product and its purpose?
- What will your product be made from, and why?
- How will it be made?
- How will it be as sustainable as possible- can you use any ideas from the PowerPoint?
- What will happen to it at the end of its life (to complete the circle)?
